Setting the payout table on Tons of tickets version 2.04 or higher

1)With the game powered off insert the new SD card into the PI. Disconnect the USB connection between the main board and the PI circled below in red and insert a USB keyboard into the same USB slot on the PI

2) Power the game on. Upon power up the game will boot to a menu showing the available tables for the game with a flashing cursor at the bottom.   Using the keyboard select the number of your table and press enter. The screen will show setting table and then reboot, at that time you can unplug the USB keyboard and reconnect the USB connection to the games main board.
